SMART SAHARA — PITCH TALKING POINTS CHEAT SHEET

Amine Taghi (South Devs) | 5:00 min (300s)

[0:00–0:35] SLIDES 1–3 • INTRO & HOOK

- **Identity:** Amine Taghi, South Devs.
- **Core Mission:** Turn Laâyoune's passive cameras into an active, life-saving AI engine.
- **Philosophy:** Sovereign, frugal innovation built for African smart cities.

[0:35–1:20] SLIDE 4 • THE REAL PROBLEM

- **Passive DVRs:** Current cameras only record footage *after* tragedy strikes.
- **Medical Emergencies:** Heart attacks and sudden collapses go unnoticed for critical minutes.
- **Missing Persons:** Lost children and disoriented elderly take hours of manual video review.
- **Morocco Digital 2030:** Need proactive protection with **$0 hardware Capex**.

[1:20–2:05] SLIDE 5 • THE SOLUTION (3 PILLARS)

- **NLP Search:** Search by plain description ("*child in red cap, yellow shirt*")—no tedious forms.
- **Autonomous Fall Detection:** Flags collapses instantly with zero human latency.
- **Privacy by Design: CNDP Law 09-08 compliant**—no facial biometrics, tracks clothing/colors, auto-blurs faces.

[2:05–2:40] SLIDES 6–7 • ARCHITECTURE & SOVEREIGNTY

- **4 Layers:** Perception (cameras) → Network (fiber) → Platform (Edge AI) → Application (Dashboard).
- **Performance:** Runs locally at **30+ FPS** on standard PC hardware.
- **Data Sovereignty:** 100% on-premises edge computing—zero cloud leaks, zero foreign server costs.

[2:40–3:55] SLIDE 8 • LIVE PROTOTYPE DEMO (CORE FOCUS — 75S)

- **Top Screen (Place du Méchouar):** Pedestrian collapses → AI verifies gravitational head-drop & immobility in 2 sec → triggers cardiac emergency alert.
- **Bottom Screen (Sector A1):** Operator enters NLP description → Part-based Re-ID locks target by clothing colors → Live GPS/camera tracking.
- **Key Message:** Replaces hours of manual scrubbing with seconds of automated rescue.

[3:55–4:25] SLIDE 9 • EXPECTED IMPACT

- **Social:** 260K citizens protected, response times cut by 80% to save lives in the golden hour.
- **Economic: 0 MAD in new cameras**—upgrades existing city cameras purely through software.
- **Environmental:** Local edge saves server emissions; direct ambulance routing cuts vehicle fuel.

[4:25–4:50] SLIDE 10 • ROADMAP & BUSINESS MODEL

- **2026:** Pilot in school zones and public squares.
- **2027:** Citywide expansion + direct API dispatch to Protection Civile.
- **2028–2030:** Sovereign SaaS scaling to municipalities across Morocco and African smart cities.

[4:50–5:00] SLIDE 11 • CONCLUSION

- **Closing Line:** "*Smart cities aren't about buying expensive cameras—they're about smarter software that saves lives.*"
- Open floor for jury Q&A.
